Advanced Solar Technology

Better Appearance

Without the visual impact of the welding strips on the front-side, the pure beauty of the solar cells is perfectly presented.

High Power Generation Efficiency

There is no metal welding strips on the front-side of the module. The power generation area of the front-side increases by 2.5%.

No Light Pollution

The light reflectivity of the module is only 1.7% due to no welding strip technology on the front-side. It reduces light pollution to the environment and neighbors.

No Hot Spot Effect When be Blocked

Using unique all back contact technology, the the positive and negative metal electrodes flow normally on the back-side when be blocked, reducing the risk of hot spots.

Long Warranty of 25 Years

The encapsulating materials use TPE backsheet, which is covered with PVF (Tedlar) film and use improved EPE film, ensuring service life of 25 years.

Better Performance in Low Light Scenes

No shield of metal electrodes on the front-side enables a spectral absorption range of 300nm-1200nm, which extends the working time. The maximum power generation gain is 2.01%.
